

## What if you get sick?

The health and safety of you and your friends and workers at Windgap is very important to us.

You may have heard of the Coronavirus (COVID-19). It's a bit like a flu that has affected many people around the world.

Coronavirus is spread through a cough or a sneeze or touching something someone with Coronavirus touched.

To stop the spread of Coronavirus:

- Do not shake hands, hug or kiss
- Try to keep 2 big steps between you and other people.

If you do not feel well and feel hot or have a cough, tell your carer or team leader who will call the doctor.

If a doctor or nurse think you are sick with Coronavirus, you will be taken to the hospital. You will need to stay there until you get better.

You will need to wear things that doctors may wear to stop others from getting sick, like a face mask and gloves. This helps keep you safe.

When you feel better you will be able to go back to your friends at home.
